

PHOTOLUMINESCENT SIGNAGE for EMERGENCY ESCAPE

Mitigating risk and maximising safety in the event of an emergency or power failure

Work personal and any visitors to your facility can rely on photoluminescent signs to guide them to safety and streamline the evacuation process. When sudden darkness occurs photoluminescent signage can provide many benefits:

- * guiding personal to an escape route
- * showing location of a muster point
- * highlighting fire exits
- * illuminating key areas in a power outage
- * provide information & locations of safety equipment in a power outage

The materials in photoluminescent signs absorb natural or ambient light and store it. This allows the sign to glow brightly in the dark and provide guidance and information during a power outage.

Training

Armour Fire Safety is a authorized distributor for Everlux, an ISO certified manufacture of photoluminescent safety signs since 1992. Contact Armour Fire Safety to learn more about emergency escape signage and information and the requirements to be code . compliant.
